DETAILED ACTION

1. Claims 1-5 are directed to an allowable product. Pursuant to the procedures set forth in the Official Gazette notice dated March 26, 1996 (1184 O.G. 86), claims 6 and 7, directed to a related species of the patentable product, previously withdrawn from consideration as a result of a restriction requirement, are now subject to being rejoined. Claims 6 and 7 are hereby rejoined and fully examined for patentability under 37 CFR 1.104.

Since all claims previously withdrawn from consideration under 37 CFR 1.142 have been rejoined, the restriction requirement made in the Office action mailed on 9/28/05 is hereby withdrawn.

2. The following is an examiner's statement of reasons for allowance: The present invention is directed to an anti-resonant structure for a speaker. Independent claim 1 identifies the uniquely distinct feature of an elastic element for absorbing vibrations from a speaker mounted in contact with the a resonant structure on one end and separated by the resonant structure at its other end by a buffer element wherein the resonant structure, the buffer element and the elastic element all have opening being aligned along the same axis when the structure is assembled. The closest prior art, Dunning (US 3275100) teaches an elastic element connected to a resonant structure through a buffer element at all points and Tanaka (US 4797935) teaches an elastic element connected between a resonant structure and speaker housing. The prior art fails to anticipate or render the independent claims obvious.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
